

***The Data used in this report is taken from the DAEN (Database of Adverse Events Notification) which is available at <https://www.tga.gov.au/database-adverse-event-notifications-daen>***

***This database is provided by the TGA (Therapeutic Goods Administration) who regulate the use of pharmaceutical drugs in Australia. This database is being used in Australia to track Adverse Events (injuries including deaths) after Covid-19 Vaccination (as well as other medications). The latest data is 14 days delayed in this database.***

**An entry in this database does NOT prove a causal link to the injury or death reported.**  
**However, it does not rule out a link either**

**The following slides are screenshots taken from this database to prove that the Adverse Events reported after Covid-19 vaccination (Cases) had a death reported also. We have taken a screenshot of the medDRA system organ class (i.e. the ‘medicine summary’ of injuries) as well as a screenshot of the ‘List of Reports’ which gives a breakdown of injuries on an individual basis. Both share a common field called ‘medDRA reaction Terms.’ In many cases (86% of all cases) this has allowed us to identify a death reported down to an individual case including age.**

**E.G. – Please refer to page 3 ( Case Number 520837 – Male 92). In this instance there was 1 case reported for Loss of Consciousness under ‘Nervous System Disorders’ - Number of cases reported = 1 and Number of cases where death was a reported outcome = 1. We can conclude from this that the only individual entry for ‘Loss of Consciousness’ also resulted in a death being reported as this was the only case of this type reported on this day. We cross reference this case with the individual entry (List of Reports) and show the individual that this case and death was reported for.**

***Every effort has been made to ensure the integrity of this data. However some information may be updated by the TGA subsequent to this report.***

# Case No 515141 – Female – age 46

Extracted from DAEN between 01/04/22 to 30/6/22

5 medicines selected between 21/01/2020 - 21/12/2020.

## Selected medicines

Trade name	Active ingredients
COMIRNATY COVID-19 vaccine	tozinameran
COVID-19 Vaccine (TNS)	COVID-19 Vaccine (Type not specified)
COVID-19 Vaccine AstraZeneca	ChAdOx1-S (Viral vector)
NUVAXOID COVID-19 Vaccine	SARS-CoV-2 rS (NVX-CoV2373)
Spikevax COVID-19 vaccine	Elasomeran (mRNA)

1 MedDRA Reaction Terms selected.

## Search results

The results are shown in two tabs.

Number of reports (cases): 1

Number of cases with a single suspected medicine: 0

Number of cases where death was a reported outcome: 1

What causes hydrops fetalis?

The condition occurs when a disease or medical condition affects the body's ability to manage fluid. There are three main causes for this type, **heart or lung problems, severe anemia (such as from thalassemia or infections), and genetic or developmental problems, including Turner syndrome.** 24 May 2021

Can a baby survive hydrops fetalis?

The prognosis for babies with hydrops fetalis depends on the underlying cause of the condition. Overall, however, **the survival rate is low.** More than half of all babies with the condition die before birth or soon after delivery.
